WeedEnder.com

Features

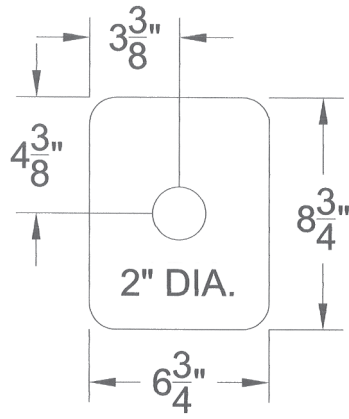

- Controls Unwanted Vegetation
- Reduces Runoff
- Maintenance-free
- Easy to Install
- Long-lasting
- No Herbicides or Poisons
- Environmentally Safe
- No Disposal Problems
- Helps Control Erosion
- No Weedeaters Required

WeedEnder® Mini Footprints are used with chain link fences, sign posts, pipes and conduits, and are constructed of the same material as the WeedEnder®. These footprints, when used with WeedEnder® Adhesive/Caulk, ensure a positive seal to the fence post and the WeedEnder® roll. They are designed to control the growth of unwanted vegetation in an environmentally safe manner. This is accomplished without adding to your runoff problems, as would be the case when using asphalt, concrete, or other nonporous weed-control methods.

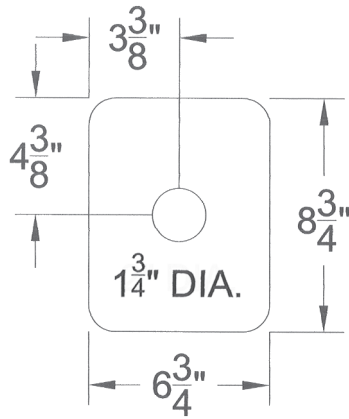

When the WeedEnder® fencing roll is pre-punched, or if you cut the hole for the fence post on the jobsite, the punched-out area will be slightly larger than the post itself. This is by design to facilitate installation by making the WeedEnder® roll easier to fit around the fence post and adjust properly. The footprint is cut to the exact size and shape of the fence post being used and acts to cover the hole once the WeedEnder® roll is in place. When properly installed by attaching the footprint to the fencing roll using Adhesive/Caulk and Staples the footprint blocks any sunlight from penetrating next to the fence post and prevents any vegetation from growing up around the post. U-TECK has a footprint to match any fence post profile and, if needed, will custom cut a footprint to your specific requirements.
